Eric Schlegel, Ph.D.

Candidate—Assistant Professor, Astronomy/Astrophysics

Chandra: Observations of the X-ray Universe

Monday, Dec 13, 2:30 - 3:30 pm UC 2.02.02—Retama Room

I will present a necessarily brief overview of the first five years of observations and science flowing from the Chandra X-ray Observatory, one of the three Great Observatories currently in orbit. Results include images and spectra from sources as near as Venus or as distant as quasars. Along the way I will describe science we believe we understand as well as puzzles yet to be solved.
